

BIOCLIMATIC PERGOLAS

Enjoy the pleasures of the outdoors life!

Our bioclimatic pergolas are designed to create an outdoor living space with all the comforts. They have a minimalist design, modern and timeless, which fits perfectly with any architectural style: the ideal solution for terraces or gardens of houses, hotels and restaurants.

Thanks to bioclimatic pergolas you will extend your home projecting it to the outside, creating new environments to enjoy maximum freedom.

Any time of year, in any season, they will protect you from sunlight, rain, wind or bad weather conditions.

The beauty of simplicity

Our pergolas are self-supporting, i.e. they support themselves thanks to their own structure. They are part of the free building sector, so they do not require special permits.

We have studied simple shapes and standard sizes to allow insertion in any context.

The electrical installations required are basic and can be powered from the home mains without any problem given the very low consumption. The installation of the wall control, for example, does not require electrical cables but operates via radio as the supplied remote control.

Without visible gutters

The optimization of our pergolas allows you not to have visually impacting gutter systems: the gutters are in fact internal and invisible from the outside. The water is discharged through pipes inserted inside the columns.

Low consumption motors

The electric motors that manage the opening of the slats are placed in a strategic and not visible point of the frame, so as to give elegance and practicality to the whole. Low-voltage technology ensures safety in case of electric shock, with a standard additional grounding protection.

You night relax outdoor!

Enjoy your outdoor environment even at night! We have prepared a system of low consumption LED lighting, positioned on the entire internal perimeter and operated with a finger from the remote control.

Thanks to the linear shapes, you can also install several modules and combine them to obtain covers for spaces with complex shapes.

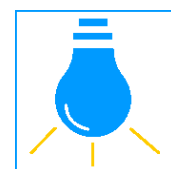

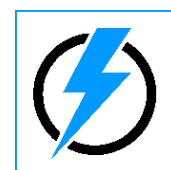

Bathing in a hot tub spa or comfortably lying on your chaise-longue, thanks to the remote control you can change at any time the amount of light or shelter from the rain, without any effort and simply by using the supplied remote control.

Quality materials

We have selected two colors for the frames and columns, opting for the most popular and appreciated solutions: white and anthracite gray. The entire structure is made of aluminum and will last for years with minimal maintenance, giving you the pleasure of having no limits.

Accessories for every need

Thanks to the zipper side shades, you'll also have the privacy you desire.

euro fence

| | |
|------------------------|---|
| Overall sizes | 300x300x250 cm - 183 kg |
| Structure | anodized aluminum painted with epoxy powders Easy mounting. |
